Subdomain1	Patients
Subdomain2	Value based healthcare
Key Points	A useful blueprint for anyone wondering how to implement value based healthcare (VBHC) for four reasons: 1) It is coauthored by clinicians and the architects of VBHC and time driven activity based costing (TDABC) 2) It clearly explains how the difficult and complex task of developing TDABC was achieved. 3) It demonstrates the use of a simple radar plot to display costs and outcomes, 4) It uses these methodologies to compare and display the key dimensions of value for three different methods of treating prostate cancer.
